Go.edu and EDmin.com Form Strategic Partnership

Partnership provides K-12 schools with easier access to a wide range of data reporting and instructional management tools.

Wichita KS (August 15, 2007) - Go.edu, a leading provider of student information systems and EDmin.com, known for its academic performance systems, have joined together to help schools manage, report and better utilize the vast amounts of data collected. Bob Worthington, Go.edu President explains, "Go.edustar™, our premier Saas student information system, allows districts to easily collect and report data on students, teachers and curriculum. By partnering with EDmin and using their INFORM program as a connecting point to Go.edustar, we are able to provide schools and districts with the ability to take the integration and analysis of this learning-centered data to the next level."

EDmin.com, through its INFORM™ program, provides educators with a tried and tested, standards-based learning management system that uses the web to track the performance of every student in a school, district, or state. "The combination of the two high-performance web-based solutions, INFORM and Go.edustar, creates a powerful, results-driven system for educators. Now, teachers and administrators can know more about what the results are of their teaching strategies, make changes as needed, and have new results reported quickly", explains D. Clayton Hoyle, co-founder, EDmin.com.

Integration of data between the two systems will be seamless and synchronized to allow for up-to-the minute reporting of student performance information from sources including high-stakes testing, end-of-course exams, and teacher assessments, as well as student demographic and curriculum data. Where allowed, data may be viewed by parents and teachers from any web-enabled computer or device.

About Go.edu -

Go.edu has been helping educators manage and report student information since 1995 by providing high-quality, web-based, Saas, SIF compliant Student Information Systems (SIS) for K-12 school districts. Go.edu products are designed to assist school district administrators and teachers by providing tools that support student data management including attendance, scheduling, grading, transcript management, and state-required attendance (ADA)

reporting. Headquartered in Wichita KS, Go.edu SIS systems are used in over one-hundred districts in CO, KS, NE, MI, and MO. For more information, call toll-free to 800-456-4685 or visit www.goedu.com.

About EDmin.com -

Founded in 1989 and headquartered in San Diego, California, EDmin's mission is, "To serve the K-12 educational community with value-driven solutions that support decision-making, accelerate learning, and improve performance." More information can be obtained by visiting www.edmin.com.
